Project:-

- **Project Title :** A WEBSITE CALLED “ONLINE ICECREAM STORE” BASED ON PHP AND HTML.

Description: This website includes all the varieties of ice cream which you can order online.

Project Title: A SCREENSEVER CALLED “MOVING BUBBLE” IN COMPUTER GRAPHICS.

- **Description:** The project was to developed a screensaver in which there were a number of bubble which are moving around whole screen.

- **Project Title: “The Family Tracking System ”**

Description: The application aims at providing a simple way-out for ensuring the child’s safety all the while he is by his own. The main objectives of this application are as follows:

The application would provide the ability to divide interested geo-graphical area into different sub zones (e.g. safe, risky, highly risky etc.) and based on branching of these zones a different alert message would be sent to registered users. The application would also provide the ability to automatically send a message to registered users with mobile’s current location after user configured time interval. On geographical boundary branch, the application would warn user in the form of a message with beep so that mobile user would also be well informed about risk associated with his/her movement.

- **Project Title: “Online School Management System ”**

Description: School management system is an android project. This project explains about implementing an application for school to manage students marks, details of students and other contact information along with class he is studying and total present and absent days in month. This project can be used to reduce the paper work and save time in school management. There by increasing the efficiency and decreasing the work load. The project provides us the information about student record, school faculty, school fee and school examination result. This system can be used as information management system for the school. This system have easy user interface and have powerful data management system which makes this system very useful.
